Site analysis

Located in the B1 Student Sci-Tech Innovation Center at China University of Mining and Technology-Beijing (CUMTB), this facility serves as a campus-wide incubator and exhibition hub for undergraduate innovation. The renovation design should meet the following criteria:

- Disciplinary Identity:** Workshops should highlight the distinct academic focus of their respective colleges, displaying innovative achievements and research themes.
- Collaborative Workspace:** Provide functional spaces designed to facilitate student communication, academic exchange, and hands-on exploratory experiments.
- Public Engagement:** Integrate tour-friendly elements to prominently showcase the university's dynamic innovation culture.

Site plan

Demand catering

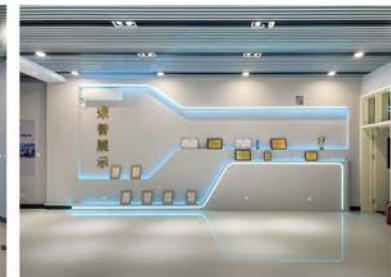

The workshop laboratories are equipped with dedicated experimental facilities. For example, the B101 displaying the University Innovation Center's slogan, Smart Vehicle Workshop (智能汽车工坊) features overview, and honors. This effectively showcases the mechanical vehicles and designated testing tracks, base's mission and achievements, **successfully driving** alongside integrated discussion areas, **fully meeting the public engagement requirements of a Collaborative Workspace.**
